Experience

- **Motif** — Remote
  Senior Software Engineer — *Jul 2026 - Present*
  - **Agents Platform**: Building the native agent experience in multiplayer, AI-native 3D architecture software. Work across the UI and backend, including a Rust/Bevy rendering layer compiled to WebAssembly.
  - **Streaming Conversations**: Developing a streaming chat system across the UI and backend to synchronize conversations across browsers and tabs.
  - **SDK**: Building an SDK that enables agents and developers to use the application programmatically.
- **Unspendable Labs** — Remote
  Lead Software Engineer — *Sep 2024 - Jul 2026*
  - **Team**: Led a team of 5 engineers across all Bitcoin Web3 products, reporting to the CTO.
  - **Kontor**: Designed and developed a Bitcoin layer 2 on the WebAssembly component model. Owned the VM, custom smart contract language, and overall architecture.
  - **Horizon Market**: Built the first version of a Bitcoin collectibles trading platform: Next.js frontend, custom wallet integration, and atomic swaps via PSBTs across multiple address types.
- **Colimit** — New York, NY
  Founding Engineer — *Sep 2023 - Sep 2024*
  - **Formal Spec-Driven Development**: First engineering hire. Designed the architecture and shipped an AI coding agent combining compilers and LLMs to generate verifiably correct code from formal specifications.
  - **Full-stack & AI**: Owned the full stack: Next.js/React SPA frontend, Haskell backend, and the LLM prompting layer.
- **City Storage Systems (Cloud Kitchens)** — New York, NY
  Software Engineer — *Sep 2022 - Sep 2023*
  - **UI Component System**: Shipped components to the React-based UI system used across all external and internal applications.
  - **Billing Application**: Worked across the stack on the billing application powering hundreds of kitchens across international markets. Java, GraphQL, gRPC, TypeScript, React.
- **Symbiont** — New York, NY
  Software Engineer — *Aug 2017 - Sep 2022*
  - **Smart Contract Language**: Designed and developed the platform's sole smart contract language and SDK, implemented in Python.
  - **Transaction Processor**: Contributed to the Haskell transaction processor, which executes ordered transactions from the log layer.
  - **Distributed Log**: Refactored the distributed log layer in Go, which orders transactions using BFT consensus.
- **IBM Watson** — New York, NY
  Software Engineer — *Aug 2016 - Aug 2017*
  - **Conversational Agents**: Built features for a customer service agent platform across the React frontend and Go backend.
  - **Notifications Service**: Built a shared service for announcements and updates across IBM Watson, with a Vue frontend and Go backend.

Education

- **The Ohio State University** — Columbus, OH
  B.S. in Computer Science & Engineering — *May 2016*
